unique site-by-site design

WD has helped BJ's design and engineer more than 50 restaurants and brewhouses across California and the Western US over the past six years.

After initially engaging only our civil engineering expertise, WD now also provides architecture and site development services to the BJ's team. Our interdisciplinary, integrated approach to project management and vendor coordination helps them get BJ's locations open quickly and cost-effectively.

results

Utilizing 40 years of experience in developing multi-unit restaurants, WD's prototype standards and highly accurate documents have reduced BJ's building costs, increased the consistency and quality of construction, and sped the construction process for their signature 7,000 to 10,000 sq. ft. casual dining locations.
