

“The speed in which the team was able to complete the work was amazing. To have actionable and measurable plans that document exactly what we have in each store is invaluable

– Senior Executive at Fortune 100 Retailer

Who Needs a Tape Measure When We Have Lasers

Laser Scanning by WD Partners

Do you have a fleet of locations but no concrete data on what is inside of each one? How can you expect to accurately outfit, remodel or merchandise them? Laser scanning takes the guesswork out of the equation. Save time and money while creating a single database to manage all of your assets, making your footprint work harder & smarter for you in this volatile retail industry.

That's Where We Come In

WD is one of only a few companies that has begun using sophisticated laser scanning technology to help retailers accurately measure spaces, but more importantly, keep real-time inventory of their resources. Additionally, the scanning process reduces time and work involved during the measuring phase of projects, while improving accuracy and the overall design process.

Our Approach

After thorough pre-planning, our laser scanning team quickly captures 360° images of your entire store **providing measurable and accurate data in hi-resolution formats**. Back in the office, we

overlay these images with CAD and BIM software in order to provide a dimensional file that can be used by designers, architects and engineers so that the **entire team is working from the same place with a clear picture and inventory of the space**.

Why WD

Having worked with over 500 clients on 30,000+ different projects across a variety of industries and countries, we bring a vision that is unparalleled. We are an organization backed by over 50 years of expertise and thought leadership. From Strategy to Design, Operations to Architecture, and Engineering to Construction, we can dream it, manage it and get it built. WD, thinkers that do™
